Functional and Shape Data Analysis (Springer Series in ...

Functional data analysis (FDA) refers to the statistical analysis of data samples consisting of random functions or surfaces, where each function is viewed as one sample element. Typically, the random functions contained in the sample are considered to be independent and smooth. FDA methodology is essentially nonparametric, utilizes smoothing methods, and allows for flexible modeling.

Analysis | Springer

Functional data analysis is a branch of statistics that analyzes

data providing information about curves, surfaces or anything else varying over a continuum. In its most general form, under an FDA framework each sample element is considered to be a function. The physical continuum over which these functions are defined is often time, but may also be spatial location, wavelength, probability, etc. Core theoretical contributions to FDA were made by James O. Ramsay of McGill University, who is also
