Fatigue Behaviour Of Hybrid Composites

Abstract A study has been made of the fatigue behaviour in repeated tension of unidirectional and $[(\pm 45, 0, 0) 2]_s$ hybrid laminates composed of XAS carbon fibres and E-glass fibres in the same 913 epoxy resin. The ordinary mechanical properties of these composites are close to those predicted by simple, conventional models of hybrid behaviour.

A study has been made of the fatigue behaviour of carbon/Kevlar-49/epoxy hybrid composites. Stress-life data have been obtained for both unidirectional and $[(\pm 45, 0, 0) 2]_s$ laminates in

repeated tension and compression-tension cycling tests at various values of the stress (or R) ratio. Goodman (constant life) diagrams are presented for the unidirectional composites which indicate that the fatigue resistance of hybrid mixtures varies linearly with composition.

For both $0^\circ/90^\circ$ and $\pm 45^\circ$ orientations, the hybrid composites exhibit an intermediate fatigue behaviour between those of basalt/epoxy and flax/epoxy composites. The fatigue resistance of basalt/epoxy composites is enhanced by flax fibre hybridisation.

Hybrid CFRP/steel composites have excellent fatigue properties. Although more sensitive to fatigue than pure CFRP, hybrid CFR/Steel laminates have a higher endurance. As in the case of the static tests a moderate amount of steel content is the most balanced option: Higher endurance stress with moderate sensitivity to fatigue.

The aim of the present study is to investigate the mechanical behavior of carbon/flax hybrid composites under static and fatigue tensile loading. The failure characteristics and parameters used in the fatigue tests were deduced from the static ones.

4.4. Hybrid effect on fatigue behaviour. As discussed in Table 5, hybrid FRP sheets exhibited lower CVs of fatigue life under fixed applied load, which is mainly attributed to the low stress of glass/basalt fibres in the hybrid fibres. Because of the difference in modulus between glass/basalt and carbon fibres, glass/basalt fibres would maintain lower stress.

Tensile fatigue behaviour of FRP and hybrid FRP sheets ...

Where increasing glass content within the hybrid composites reinforced with kenaf, hemp, and flax fibres improved the composite's fatigue strengths but the fatigue sensitivity reduced when

compared with individual natural fibre composite counterparts. Therefore, previous studies indicated that the incorporation of natural fibres within the hybrid composites plays a role of stiffness stabilisation and jute fibres that were used in this work performed the same function.

Dai et al. presented a 3D model to describe the fatigue behaviour of UD glass/carbon hybrid composites under tension-tension. When Wu et al. (Wu et al. 2010) compared the tensile fatigue behavior of carbon, glass, and basalt fiber composites with hybrid composites,

It is possible to find in the literature several studies for fatigue behaviour of hybrid composites [26–29]. The objective of this paper was to study the static and fatigue flexural strength of hybrid

laminates fabricated with natural fibre/polypropylene core and glass fibres reinforced polypropylene skins.

Flexural behaviour of hybrid laminated composites

The fatigue behavior of the unnotched and notched silicon carbide fiber-
