Conceptual Schema And Relational Database

Database schema describes the structure and constraints of data representing in a particular domain. A Relational schema can be described a blueprint of a database that outlines the way data is organized into tables. This blueprint will not contain any type of data. In a relational schema, each tuple is divided into fields called Domains. There are different kinds of database schemas: Conceptual schema

Conceptual Schema and Relational Database Design: A Fact ...

The conceptual schema describes the Database structure of the whole database for the community of users. This schema hides information about the physical storage structures and focuses on describing data types, entities, relationships, etc. This logical level comes between the user level and physical storage view.

DBMS Schemas: Internal, Conceptual, External

The conceptual schema is related to the internal schema through a conceptual-internal mapping. This enables the DBMS to find the actual record or combination of records in physical storage that constitute a logical record in the conceptual schema, together with any constraints to be enforced on the operations for that logical record. It also allows any differences in entity names, attribute names, attribute order, and data types to be resolved.

Three Schema Architecture[Logical, Physical schema, user view]

IDEF1X is a method for designing relational databases with a syntax designed to support the semantic constructs necessary in developing a conceptual schema. A conceptual schema is a single integrated definition of the enterprise data that is unbiased toward any single application and independent of its access and
