Answer: Because birds are one of the descendants from the common ancestor. If birds are not included, the result would be paraphyletic. Tell students that modern evolutionary classification uses a method called cladistic analysis.

Evolutionary Classification - SlideShare

Lesson Overview Modern Evolutionary Classification. Clades. A clade is a group of species that includes a single common ancestor and all descendants of that ancestor—living and extinct. A clade must be a monophyletic group. A monophyletic group must include all species that are descended from a common ancestor, and cannot include

any species that are not descended from that common ancestor.

Modern Evolutionary Classification Answer Key

Evolutionary Classification The study of evolutionary relationships among organisms is called phylogeny. Classification based on evolutionary relationships is called phylogenetic systematics, or evolutionary classification. Evolutionary classification places organisms into higher taxa whose members are more
