### **How Can You Tell When a Quadratic Equations Has No Real ...**

We explain Quadratic Equations with No Real Solutions with video tutorials and quizzes, using our Many Ways(TM) approach from multiple teachers. This lesson will present how to recognize from a graph when there are no real solutions of a quadratic equation.

### **Quadratic Equations with No Real Solutions Tutorial ...**

Real solutions are more like real societies, in which some members are "more equal than others." Suppose, for example, that unlike molecules are more strongly attracted to each other than are like molecules. This will cause A-B pairs that find themselves adjacent to each other to be energetically more stable than A-A and B-B pairs.

### **8.8: Ideal vs. Real Solutions - Chemistry LibreTexts**

You need to find the discriminant which is the amount under the radical of the quadratic formula. Whether this number is positive, negative, or zero determines how many solutions exist. Standard form of Quadratic Equation:  $ax^2 + bx + c = 0$ . Quadratic Formula:  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$  Discriminant:  $\Delta = b^2 - 4ac$ . If  $\Delta > 0$  then 2 real solutions.

### One, Two, or No Real Solution Problem. | Wyzant Ask An Expert

In this case, there is no  $x$  that will satisfy the equation given in Step #6. So the solution to this equation is: there is NO SOLUTION.

### How to Know when an Equation has NO Solution, or ...

A 'real solution' generally means that the solution is one from the real number system. When solving an equation (especially at lower grade levels) the answer might be that there are no real...

### What is a real solution? - Answers

When the discriminant equals zero, then there is one real solution. If the discriminant is less than zero, there are two imaginary solutions. Likewise, when the discriminant is greater than zero there are two real solutions that are also rational if discriminant is equal to a perfect square.

### What Are Real Roots in Math? - Reference.com

$x = 0$ . And  $\sin. x = 0$  if and only if  $x = n\pi$  where  $n$  is any integer. Notice that if we choose  $n = 0$ , we see th. A real solution is a value of  $x$  that is a real number which makes the equation true. For example,  $x - 1 = 0$  is true if and only if  $x = 1$ , and since 1 is a real number, we know that 1 is a real solution.

### What is a distinct real solution? - Quora

Question 233413: Determine the nature of the solutions of the equation: Does it have 1 real solution, 2 real solutions, or 2 non real solutions?  $x^2 - 8x + 16 = 0$   
 $(-8)^2 - 16 \cdot x \cdot 16 = 64 - 256$  The answer 2 non real solutions? I think I went wrong somewhere. Answer by Alan3354(67175) (Show Source):

### Does it have 1 real solution, 2 real solutions, or 2 non ...

"No solution" means that there is no value, not even 0, which would satisfy the equation. Also, be careful not to make the mistake of thinking that the equation  $4 = 5$  means that 4 and 5 are values for  $x$  that are solutions. If you substitute these values into the original equation, you'll see that they do not satisfy the equation.

### Special Cases and Applications

Since the discriminant is negative, there are no real solutions to this quadratic equation. The only solutions are imaginary . Below is a picture of this quadratic's graph.

quadratic equations and their solutions.  
 $x^2 - 2x - 3 = 0$ .  $x^2 - 6x + 9 = 0$ .  $x^2 + 3x + 3 = 0$ . a positive number inside the square root. zero inside the square root. a negative number inside the square root. two distinct real-number solutions. one (repeated) real-number solution. no real-number solutions. associated functions and their graphs.  $y = x^2 - 2x - 3$

### The Quadratic Formula: The Discriminant and Graphs ...

If a graph of a quadratic,  $f(x)$ , does not have an  $x$ -intercept then  $f(x)=0$  has no Real solutions. The  $x$ -axis is composed of all points for which  $f(x)$  (or, if you prefer,  $y$ ) is equal to 0 If the graph of  $f(x)$  does not have an  $x$ -intercept then it has no (Real) points for which  $f(x)=0$

### How do you determine whether there are two, one or no real ...

If equation 1 was solved for a variable and then substituted into the second

equation a similar result would be found. This is because these two equations have No solution. Change both equations into slope-intercept form and graph to visualize. These lines are parallel; they cannot intersect.

### **How to find out when an equation has no solution - Algebra 1**

You can put this solution on YOUR website! When you solve a quadratic equation using the quadratic formula, , whenever the quantity inside the radical, is negative, then imaginary numbers are involved. Moreover if is a perfect square, this tells you that the problem could have been solved by factoring. Anyway, in your problem, ,  $a = 4$ ,  $b = -3$ , and  $c = 8$ .

**SOLUTION: This quadratic equation**

### **has no real solution ...**

Recall that for a quadratic equation  $ax^2 + bx + c = 0$ , the discriminant is the expression  $b^2 - 4ac$ , and that the quadratic has no real solutions if and only if  $\Delta < 0$ . The previous part of the question led to the quadratic equation  $15x^2 - 30x + 25 = 2k$ , which we can rewrite as  $15x^2 - 30x + (25 - 2k) = 0$ .

### **Solution | When do these simultaneous equations have no ...**

We only have Real numbers (that is, fractions, decimals, whole numbers and "irrational" numbers such as  $\pi$ ) to deal with the question, and if you are asked to take the square root of a negative number, there are no Real solutions! A solution does exist in the "Imaginary" numbers.
