Elaborating on Darwinian components and biological connections with behavior, the book treats the topic from a consistent worldview of selectionism. The functional relations between the organism and the environment are described, and their application in accounting for old behavior and generating new behavior is illustrated. Expanding on concepts of past editions, the fifth edition provides updated coverage of recent literature and the latest findings. There is increased inclusion of biological and neuroscience material, as well as more data correlating behavior with neurological and genetic factors. The chapter on verbal behavior is expanded to include new research on stimulus equivalence and naming; there is also a more detailed and updated analysis of learning by imitation and its possible links to mirror neurons. In the chapter on applied behavior analysis (ABA), new emphasis is given to contingency management of addiction, applications to education, ABA and autism, and prevention and treatment of health-related problems. The material presented in this book provides the reader with the best available foundation in behavior science and is a valuable resource for advanced undergraduate and graduate students in psychology or other behavior-based disciplines. In addition, a website of supplemental resources for instructors and students makes this new edition even more accessible and student-friendly (www.psypress.com/u/pierce).

Designing Teaching Strategies

An Applied Behavior Analysis Systems Approach *Elsevier*

The US Dept. of Education, in conjunction with the US Dept. of Health and Human Services, recently unveiled a \$50 million effort to expand research on early childhood cognitive development. A key issue identified requiring more information and research was the education and professional development of educators. Along these lines, Doug Greer has prepared a book discussing how best to teach, how to design functional curricula, and how to support teachers in using state-of-the-art science instruction materials. The book provides important information both to trainers of future teachers, current teachers, and to supervisors and policy makers in education. To trainers there is information on how to motivate, mentor, and instruct in-service teachers to use the best scientifically based teaching strategies and tactics. To in-service teachers, there is information on how to provide individualized instruction in classrooms with multiple learning and behavior problems, school interventions to help prevent vandalism and truancy, and how curricula and instruction can be designed to teach functional repertoires rather than inert ideas. To policy makers and supervisors, the book discusses how to determine the effectiveness of curricular initiatives toward meeting mandated standards in national assessments. Doug Greer was recently awarded the Fred S. Keller Award for Distinguished Contributions to Education by APA for the research and application of the material covered in this book. School programs incorporating the material used in this book have produced 4-7 times more learning outcomes for students than control and baseline educational programs (see www.cabas.com) The book provides research-based and field-tested procedures for: * Teaching students of all ability levels ranging from preschool to secondary school * How to teach special education students in the context of a regular classroom * Best practices for all teachers to teach more effectively * Means of monitoring and motivating teachers' practices * A comprehensive and system-wide science of teaching—post modern-postmodern! * Tested procedures that result in four to seven times more learning for all students * Tested procedures for supervisors to use with teachers that result in significant student learning * Tested procedures for providing the highest accountability * A systems approach for schooling problems that provide solutions rather than blame * Parent approved and parent requested educational practices * Means for psychologists to work with teachers and students to

solve behavior and learning problems * A comprehensive systems science of schooling * An advanced and sophisticated science of pedagogy and curriculum design * Students who are not being served with traditional education can meet or exceed the performance of their more fortunate peers, * Supervisors can mentor teachers and therapists to provide state of the science instruction * Parent education can create a professional setting for parents, educators, and therapists to work together in the best interests of the student, * Teachers and supervisors who measure as they teach produce significantly better outcomes for students, * Systemic solutions to instructional and behavioral problems involving teachers, parents, supervisors provide means to pursue problems to their solution, * A science of teaching, as opposed to an art of teaching, can provide an educational system that treats the students and the parents as the clients.
