Energy Metabolism Indirect Calorimetry And Nutrition
Indirect calorimetry is the method by which measurements of respiratory gas exchange (oxygen consumption, V O 2 and carbon dioxide production, V CO 2) are used to estimate the type and amount of substrate oxidized and the amount of energy produced by biological oxidation. Indirect calorimetry considers the whole organism in an idealized system as one big compartment containing all living cells, bathed by a homogeneous extracellular fluid and renewed by a constant blood flow.

Results: Indirect calorimetry analysis revealed that HP and RQ were no significant difference between 24 h fasting and 48 h fasting, which were lower than those of fed state ($P < 0.01$). The nitrogen concentration of urine tended to decrease with fasting ($P = 0.054$). Metabolomics analysis between the fed and fasted state revealed differences in 15 compounds, most of which were not significantly different between 24 h fasting and 48 h fasting.

In indirect calorimetry, energy expenditure is determined by measuring the amount of oxygen consumed and carbon dioxide produced. The respiratory quotient (RQ), which provides information about metabolic substrate utilization (lipid or carbohydrate), is calculated by dividing the volume of CO_2

produced by the volume of O_2 consumed ($RQ = VCO_2 / VO_2$).

Abstract. The daily pattern of energy expenditure and the oxidation rates of carbohydrates, fats, and protein were evaluated by indirect calorimetry in 18 control subjects (Group 1) and 34 cirrhotic patients who were divided into Groups 2a and 2b showing indocyanin green retention rates at 15 min of <30% and 30% or more, respectively. The ratio of resting energy expenditure to basal energy expenditure (%REE) was higher in the cirrhotic patients than in the controls at 8:30 AM and 2:30 PM. **Daily pattern of energy metabolism in cirrhosis** energy metabolism indirect calorimetry and nutrition Media Publishing eBook, ePub, Kindle PDF View ID 952d06fb3 May 07, 2020 By Astrid Lindgren reaction of an organ isms metabolism as it adapts to a different physiological litfl has an excellent
