"The Difference Engine" makes much use of a number of story telling devices - there's a McGuffin (the box), a Chekov's Gun, a Femme-Fatale and a Man-of Action, and a twist at the end. The plot, however, is tenuous to say the least and is reliant on the McGuffin for driving the story along (well, that's what McGuffin's are for, isn't it?).

A difference engine, first created by Charles Babbage, is an automatic mechanical calculator designed to tabulate polynomial functions. Its name is derived from the method of divided differences, a way to interpolate or tabulate functions by using a small set of polynomial co-efficients. Most mathematical functions commonly used by engineers, scientists and navigators, including logarithmic and trigonometric functions, can be approximated by polynomials, so a difference engine can compute many u

Difference engines are so called because of the mathematical principle on which they are based, namely, the method of finite differences. The beauty of the method is that it uses only arithmetical addition and removes the need for multiplication and division which are more difficult to implement mechanically. Difference engines are strictly calculators. They crunch numbers the only way they know how - by repeated addition according to the method of finite differences.
