Python For Loops. A for loop is used for iterating over a sequence (that is either a list, a tuple, a dictionary, a set, or a string).. This is less like the for keyword in other programming languages, and works more like an iterator method as found in other object-orientated programming languages.. With the for loop we can execute a set of statements, once for each item in a list, tuple, set etc.

Python For Loops - W3Schools

Python is an interpreted, high-level and general-purpose programming language.Created by Guido van Rossum and first released in 1991, Python's design philosophy emphasizes code readability with its notable use of significant whitespace.Its language constructs and object-oriented approach aim to help programmers write clear, logical code for small and large-scale projects.
