Rotating electrical machine consists of a stator, rotor and the air gap between them. Stator and rotor has windings. The rotor is installed into the stem, and the stem connects to the motor and any other loads. The windings are there to carry the electrical current that generates magnetic fields for the electrical load.

What is rotating electric machine -

Student Circuit

The electric machines are of three main types, transformer, generator, and motor. Electrical Transformer: In the transformer, both input and output are electrical power. Electrical Generator: In a generator, the input is mechanical power and the output is electrical power. Electrical Motor: In a motor, the input is electrical power and output is mechanical power.
