Cellular respiration is the process of oxidizing food molecules, like glucose, to carbon dioxide and water. (4.5.1) $C_6H_{12}O_6 + 6 O_2 + 6 H_2O \rightarrow 12 H_2O + 6 CO_2$ The energy released is trapped in the form of ATP for use by all the energy-consuming activities of the cell. The process occurs in two phases:
