Downscaling Methodology To Produce A High Resolution

Downscaling is any procedure to infer high-resolution information from low-resolution variables. This technique is based on dynamical or statistical approaches commonly used in several disciplines, especially meteorology, climatology and remote sensing. The term downscaling usually refers to an

increase in spatial resolution, but it is often also used for temporal resolution.

Method 1: Statistical Downscaling using Delta Addition The difference between present and future simulations are added to the present observation - See Plot 1 below. First, the mean difference between present simulation (green) and future simulation (red) is calculated.

Statistical Downscaling | Regional Climate Model ...

Statistical downscaling is a two-step process consisting of i) the development of statistical relationships between local climate variables (e.g., surface air temperature and precipitation) and large-scale predictors (e.g., pressure fields), and ii) the application of such relationships to the output of global climate model experiments to simulate local climate characteristics in the future.

What is downscaling? | GIS Climate Change Scenarios

To improve the simulation accuracy of downscaling methods, the Bayesian Model Averaging (BMA) method combined with three statistical downscaling methods, which are support vector machine (SVM), BCC/RCG-Weather Generators (BCC/RCG-WG), and Statistics Downscaling Model (SDSM), is proposed in this study, based on the statistical relationship between the larger scale climate predictors and observed precipitation in upper Hanjiang River Basin (HRB).

Comparison of Three Statistical Downscaling Methods and ...

Downscaling The goal of downscaling is to create locally accurate climate information from global-scale data by placing it in the context of observed local climatological conditions. This improves the spatial and temporal resolution of the data, making it more useful for local and regional analyses. Downscaling results.

Downscaling| SNAP

Downscaling makes use of systematic dependencies between local conditions and large-scale ambient phenomena in addition to including information about the effect of the local geography on the local climate. The application of downscaling can involve several different approaches.

The ENSEMBLES downscaling portal for statistical downscaling provides user-friendly web access to statistical downscaling techniques and simulations produced in ENSEMBLES. It allows users to choose a method of statistical downscaling and produce high-resolution predictions either using as predictands (target data), observational datasets already mounted on the server or data uploaded by the user.

Downscaling tools

Dynamical downscaling methods provide 20 to 50 km surfaces by remodelling GCM outputs.However, they are only applicable to a limited number of GCMs and require considerable processing capacity. Statistical downscaling, on the other hand, provides an easy-to-apply and much more rapid method for developing high-resolution climate change surfaces for high resolution regional climate change impact assessment studies.
