Biology 12 The Cell Membrane

The cell membrane encloses the cell from extracellular fluid, just like how our skin encloses the rest of our body from the outside. Modern science accepts the fluid mosaic model of cell membrane structure. In this model, the main components of the cell membrane are phospholipids. A bilayer of phospholipids side by side forms the "fluid" portion of the cell membrane.

Cell Membrane - Biology 12 The Cell

In both unicellular and multicellular organisms, the cells are kept separated from each other and surroundings by a barrier called plasma membrane or cell membrane. Cell membrane, also called the plasma membrane, is a physical barrier between a cell and the surrounding environment. It is the outermost part of the cell in animals.

Cell Membranes | Function, Structure, Model, Facts & Notes

The cell membrane is a multifaceted membrane that envelopes a cell's cytoplasm. It protects the integrity of the cell along with supporting the cell and helping to maintain the cell's shape. Proteins and lipids are the major components of the cell membrane.

A cell's plasma membrane defines the boundary of the cell and determines the nature of its contact with the environment. Cells exclude some substances, take in others, and excrete still others, all in controlled quantities. Plasma membranes enclose the borders of cells, but rather than being a static bag, they are dynamic and constantly in flux.

Biology 12 - Plasma Membrane Permeability - Section 3-5

The cell membrane surrounds every living cell and delimits the cell from the surrounding environment. It serves as a barrier to keep the contents of the cell in and unwanted substances out. It also functions as a gate to both actively and passively move essential nutrients into the cell and waste products out of it.

Biology 12: Self Test 7 - Angelfire

The cell membrane allows the cell to stay structurally intact in its water-based environment. The function of the plasma membrane is to control what goes in and out of the cell. Some molecules can go through the cell membrane to enter and leave the cell, but some cannot. The cell is therefore not completely permeable.
