The light source is red, so the screen looks red and the shadow looks black. Color the sketch with colored markers, or label the colors with pen or pencil. 2. A green lamp is turned on and makes a second shadow. The formerly black shadow cast by the red light is no longer black, but is illuminated with green light. So it is green. Color or mark it green.

No or low color development is most likely due to a reagent failure. The most common reagent to fail is the enzyme label. There are two potential problems; first that the enzyme has lost activity; second that the conjugate has degraded and can no longer bind efficiently to the

antibody. The first case is easy to check.
