Visual Basic 6 Client Server

The client/server model is often used with database programs where a front end program, often designed in Visual Basic or Microsoft Access, is used to present the user with data that is acquired from a database server. A client/server application is an example of a 2-tier distributed application. The logic for client/server applications can also be designed to form a separate middle tier instead of running either in the client or the server or being split between the two applications.
