What Is a Unique Solution in Linear Algebra? - YouTube

In linear algebra, Cramer's rule is an explicit formula for the solution of a system of linear equations with as many equations as unknowns, valid whenever the system has a unique solution. It expresses the solution in terms of the determinants of the (square) coefficient matrix and of matrices obtained from it by replacing one column by the column vector of right-hand-sides of the equations.

the solution is the single point $(2, 1, 3)$ or $x=2, y=1, z=3$. A system has infinitely many solutions when it is consistent and the number of variables is more than the number of nonzero rows in the rref of the matrix. For example if the rref is has solution set $(4-3z, 5+2z, z)$ where z can be any real number. In this case z is called the parameter.

A First Course in Linear Algebra

A solution of a linear system is an assignment of values to the variables $x_1, x_2, \dots, x_n$ such that each of the equations is satisfied. The set of all possible solutions is called the solution set. A linear system may behave in any one of three possible ways: The system has infinitely many solutions. The system has a single unique solution.
