Former systems subdividing the Danube River into sections Several systems to subdivide the Danube River into „homogeneous“ sections have been established before based on different abiotic parameters (e.g. geological structure, slope, geomorphology).

Typology of the Danube River - Danube Regional Project

The province of Pannonia lay west of the River Danube in the Carpathian Basin. In the 3rd century, the importance of the Sarmatian land, the Barbarian territory, increased for the Romans as a defense zone against eastern assaults because they had to confront Gothic attacks from the east. 35 In 375, the Huns crossed the River Volga and forced the fleeing peoples westward.

There continues to be controversy regarding the typological affinities and temporal placement of bifurcate-stemmed dart points across much of the Great Basin. Morphological analysis of 688 projectile points from eight localities suggests that much of this variation conforms to two formal expressions, gracile artifacts equating to the Gatecliff Split-stem series in more northern areas and robust artifacts consistent with historical descriptions of the Pinto series in the southwestern Great Basin.
