Fish reproductive organs include testes and ovaries.In most species, gonads are paired organs of similar size, which can be partially or totally fused. There may also be a range of secondary organs that increase reproductive fitness. The genital papilla is a small, fleshy tube behind the anus in some fishes, from which the sperm or eggs are released; the sex of a fish often can be determined ...

Fish reproduction - Wikipedia

For example, habitat plays an important role in the life cycle of many marine organisms. Some select different habitats for different stages of life such as breeding, nesting, juvenile development, and maturity. Tracking migratory marine life through its life cycle is used to understand how a given species survives in its changing environment.

Marine Life Cycles ~ MarineBio Conservation Society

It also contains published or unpublished (but documented) observations on the reproduction and development of marine invertebrates of the northern Pacific coast. The book is divided into chapters devoted to different invertebrate phyla, including methods for culturing their larvae, as well as information on the timing of spawning and development of as many Pacific NW species as have been studied.
