This is called a multi-step problem, where we solve one problem

first (finding the edges of $\triangle BCD$) as an intermediate step, and then apply the results to another triangle. But to apply the Pythagorean Theorem to $\triangle BCD$ we need more than just the length of the hypotenuse. We need one more side. This is where the next hint comes in.

Topics Covered by Infinite Geometry

To solve problems that use the Pythagorean Theorem, we will need to find square roots. In Simplify and Use Square Roots we introduced the notation $\sqrt{m}$ and defined it in this way: If $m = n^2$, then $\sqrt{m} = n$ for $n \geq 0$. If $m = n^2$, then $m = n^2$ for $n \geq 0$. For example, we found that $\sqrt{25} = 5$ because $5^2 = 25$.
