Abstract. In this chapter the idea of the impedance cardiography will be presented followed by a description of a central hemodynamics ambulatory monitoring system, available for both research and clinical applications. Basing on the REOMONITOR system, developed in my home institution, the essential parts of the most of the ambulatory systems will be presented.

The second part contains the description of foundations of impedance cardiography (ICG), the models used to describe the ICG technique and the description of available

systems for ambulatory monitoring of cardiac hemodynamics. The third part is devoted to the validation of the ambulatory ICG method, the verification of the quality of long term ICG recordings and the discussion of the limitations of this technique.
