Synchronous machines are commonly
 used as generators especially for large
 power systems, such as turbine
 generators and hydroelectric generators
 in the grid power supply. Because the
 rotor speed is proportional to the
 frequency of excitation, synchronous
 motors can be used in situations where
 constant speed drive is required.

The synchronous machine is an electromechanical device, and thus also

requires expressions for the electromagnetic torque and the speed of the machine. Equation SM-21 expresses the electromagnetic torque in terms of the flux linkages, and equation SM-22 determine the rotational speed from the electromagnetic torque, load torque, and moment of inertia.
