Bond Energy Answer

A C–C bond has an approximate bond energy of 80 kcal/mol, while a C=C has a bond energy of about 145 kcal/mol. We can calculate a more general bond energy by finding the average of the bond energies of a specific bond in different molecules to get the average bond energy.

Bond Energies - Chemistry LibreTexts

The bond energy for a particular type of bond can vary from one molecule to another because the atomic environment of a bond can influence the amount of energy needed to break the bond. For example the carbon—carbon bond in the two molecules shown below may not have the same bond energy because the surrounding atoms are different.

Weebly

The bond energy is the average of the bond dissociation energies in a molecule. The exact properties of a specific kind of bond are determined in part by the nature of the other bonds in the molecule; for example, the energy and length of the C-H bond will vary depending on what other atoms are bonded to the carbon atom.
