Free, damped and forced oscillations. There are three main types of simple harmonic motion: (a) free oscillations – simple harmonic motion with a constant amplitude and period and no external influences. (b) damped oscillations – simple harmonic motion but with a decreasing amplitude and varying period due to external or internal damping forces. (c) forced oscillations – simple harmonic motion but driven externally.

Oscillation is a periodic movement of a particle or a system that can cause a wave. A wave is created by an oscillation either mechanically or electromagnetically. An oscillation can occur due to a wave too. An oscillation is a phenomenon that is localized to a certain region whereas a wave is a phenomenon that travels.

Wave - Wikipedia

Vibrations and waves are everywhere. If you take any system and disturb it from a stable equilibrium, the resultant motion will be waves and vibrations. Think of a guitar string—pluck the string, and it vibrates. The sound waves generated make their way to our ears, and we hear the string's sound. Our eyes see what's happening because they receive the electromagnetic waves of ...
