Ieee 693 Seismic Qualification Of

It is not intended that existing substations must be retrofitted to these recommended practices. Instructions on how to include this recommended practice in specifications are provided. IEEE Std 693 (TM) is designed as an integrated set of requirements for the seismic qualification of electrical power equipment. Users should use IEEE Std 693 without modification or removal of any requirement, except as allowed herein.

693-2018 - IEEE Recommended Practice for Seismic Design of ...

IEEE 693-2005 - IEEE Recommended Practice for Seismic Design of Substations Seismic design recommendations for substations, including qualification of each equipment type, are discussed. Design recommendations consist of seismic criteria, qualification methods and levels, structural capacities, performance requirements for equipment operation, installation methods, and documentation

IEEE 693-2018 - IEEE Recommended Practice for Seismic ...

IEEE 693 covers seismic qualification of battery racks, transformers, switchgear and other products and equipment for substations. The standard details the requirements for qualification by analysis and shake table testing. IEEE 693 specifies three different seismic levels for qualification: High Seismic Level, Moderate Seismic Level, and Low Seismic Level.

IEEE 693 | TRU Compliance

Overall, IEEE 693-2018 provides minimum guidelines for the seismic design of substations and the seismic qualification of equipment, with an emphasis on electrical equipment and its anchorage. For the ease of the user, the standard features a section on the document’s instructions. IEEE 693-2018 is a revision of IEEE 693-2005.
