Tissue Engineering and Regenerative Medicine

Tissue engineering is a biomedical engineering discipline that integrates biology with engineering to create tissues or cellular products outside the body or to make use of gained knowledge to better manage the repair of tissues within the body. Many new cellular therapies are being developed that create challenges for engineering tissue function.

Tissue Engineering - an overview | ScienceDirect Topics

The process of tissue engineering is a complicated one. It involves forming a 3D functional tissue to help repair, replace, and regenerate a tissue or an organ in the body. To do this, cells and biomolecules are combined with scaffolds. Scaffolds are artificial or natural structures that mimic real organs (such as the kidney or liver).

Overview of Tissue Engineering - Verywell Health

Tissue engineering is a method whereby the patient has cells extracted from his or her body and grown under laboratory conditions for a myriad of applications such as cartilage, skin grafts, heart valves and tendons, without the risk of rejection, infection or the ethical dilemma involved in transplanting a donated organ.
