Forest Management And Climate Change

In sum, management policies have created tinderboxes in Western forests, and climate change has made it much more likely that those tinderboxes will erupt into destructive fires. A third factor is...

Climate Change and Forest Management Have Both Fueled ...

Climate change and forest management have both fueled today's epic Western wildfires A war against fire. Natural fire is an important part of the ecology of Western forests. Many of the conifers, or... Primed to burn. Experts broadly agree now that decades of fire suppression actually made the risk ...

Climate change and forest management have both fueled ...

Description. The document summarizes knowledge and experiences in forest management as a response to climate change, based on a literature review and a survey of forest managers. This is part of the publications series produced by the Forest and Climate Change Programme of FAO. The programme seeks to provide timely information and tools to a wide range of stakeholders, with the ultimate objective of assisting countries' efforts to mitigate and adapt to climate change through actions ...

Forest Management and Climate Change: a literature review ...

This document summarizes knowledge and experiences in forest management

as a response to climate change, based on a literature review and a survey of forest managers. This is part of an FAO-led process to prepare climate change guidelines for forest managers. It examines climate change impacts on forests and forest managers throughout the world.

Forest Management and Climate Change: a literature review

One element is improving forest management to make these lands less primed to burn. The other is reducing carbon emissions and reining in global temperatures — the only way to moderate climate conditions that make fires larger and more likely.

Forest management, climate change

both fueled epic ...

Forest management already addresses many of the problems, such as fire, disease, insects and reforestation failures, that are will occur under a changed climate; it is the location and extent of the problems that will change. It may be appropriate to plant a mixture of ecotypes to produce forests that can adjust to a changing climate.

Forest management and climate change.

Adapting forest management to climate change involves monitoring and anticipating change and undertaking actions to avoid the negative consequences or take advantage of potential benefits of those changes (Levina and Tirpak 2006). Adopting the

principles and practices of sustainable forest management (SFM) can provide a sound basis for addressing the challenges of climate change.
