The precipitation reaction undergoes in aqueous solutions or
medium in an ionic state. The reaction takes place between ions
present in the aqueous solutions, forming the product; The
products formed at the end of precipitation reaction are the
precipitates which are insoluble in aqueous solutions;
Precipitation reactions are known as ionic reactions since the ions
actively take part in the reaction and form the product.

Precipitation Reaction - Examples & Definition ...

Precipitation refers to a chemical reaction that occurs in aqueous
solution when two ions bond together to form an insoluble salt,
which is known as the precipitate. A precipitation reaction can
occur when two solutions containing different salts are mixed,
and a cation/anion pair in the resulting combined solution forms
an insoluble salt; this salt then precipitates out of solution.
